PROFESSIONAL SUMMARY

AI/ML-focused software developer experienced in Google Gemini vision-language models, computer vision, and full-stack systems. Built TulongGuro, an AI-assisted grading platform that cut grading time per paper by 55% in a three-teacher study; LiturgyGen, a document automation system with 152 automated tests; and Kindway, an AI reflection journal live on Android and the web. Seeking an AI/ML engineering internship focused on multimodal AI, computer vision, and applied machine learning.

EDUCATION

B.S. Computer Science | Holy Angel University, Angeles City | Expected Apr 2027
GWA 1.15 (1.0 highest) | President's Lister, 6 semesters | Coursework: Intelligent Systems, Machine Learning, Operating Systems

EXPERIENCE

Thesis Lead & AI/Full-Stack Developer | Holy Angel University (Apprenticeship, Part-time) | Aug 2025 – Sep 2026
- Led architecture and end-to-end development of TulongGuro through to a working classroom pilot aligned with the DepEd MATATAG Curriculum.
- Integrated Gemini vision-language models, rubric-based grading, classroom management, analytics, and teacher validation.

Software Developer, Internal Systems | HAU Campus Ministry Office (Contract, Part-time) | Aug 2026 – Sep 2026
- Built LiturgyGen for the office's daily and monthly missalette publishing, replacing manual liturgical date resolution, reading retrieval, prayer matching, and document assembly.

Student Assistant Scholar & Google Developer Organization Staff | Holy Angel University | Jun 2023 – Present
- Earned a 100% full-tuition scholarship for the full college program in recognition of sustained service as a Student Assistant.
- Streamlined office operations and coordinated technical events through cross-functional collaboration.

VP for Marketing | Scholar Volunteers for the Environment (HAU-SVE) | May 2026 – Present
- Led digital outreach and campaign content for environmental events, supporting member participation and event promotion.

SELECTED PROJECTS

TulongGuro: AI-Assisted Grading System | tulong-guro.vercel.app | Apr 2026 – Oct 2026
- Integrated Google Gemini vision-language models to draft rubric scores and diagnostic feedback on handwritten and typed work, which teachers approve before release; cut grading time per paper by 55% in a 3-teacher study.
- Built a React 19/Vite PWA with Tailwind CSS, Node.js/Express, Prisma, Supabase PostgreSQL/Object Storage, and Vercel/Render deployments; added classroom management, competency analytics, and student milestone badges.

LiturgyGen: Automated Missalette Publishing Engine | github.com/Damudachi/LiturgyGen | Sep 2026 – Present
- Built a full-stack document automation system that resolves Philippine liturgical dates, parses readings, matches Prayers of the Faithful through a cascading engine, and compiles print-ready .docx files for daily or monthly output.
- Engineered request queues, raw-response caching, batch processing, streamed progress, monthly exports, and 152 automated tests for resilient data retrieval and document generation.

Kindway: AI Reflection Journal for Android & Web | kindway.pages.dev | Oct 2026 – Present
- Built solo a local-first React Native/Expo (TypeScript) journal for Android and an installable iPhone PWA on Cloudflare Pages, with Supabase accounts, Row Level Security, and cloud sync.
- Shipped consent-gated AI reflections via Supabase Edge Functions (GroqCloud), with a 20-case live evaluation, a security review with no open high-severity findings, and 510 automated tests.

INTELSY: PPE Detection (Team Project) | github.com/ShawnUriel/MIGHT-TEAM_INTELSY | Jan 2026 – Mar 2026
- Fine-tuned YOLOv8 on a 14-class PPE dataset (hardhats, safety vests, face masks), reaching 0.78 mAP@0.5 and 0.84 recall, with webcam and batch inference.
- Ran ablations over image size and dataset fraction against a majority-class baseline, comparing precision, recall, and mAP.

Additional Projects: MeatShopPOS—Scala inventory/POS system; Watts Energy—Flutter household energy forecasting app; HAU About That Way—Flutter/Supabase campus navigation app.

TECHNICAL SKILLS

AI/ML: Python, Google Gemini API, Vision-Language Models, YOLOv8, RAG, LangChain, NLP, BERT, CNNs
Frontend: React, Vite, Flutter, Tailwind CSS, JavaScript
Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, Supabase, Prisma, SQLite, SQL, Scala, Java
Cloud & DevOps: Docker, Nginx, Vercel, Render, AWS (EC2, RDS, Lambda)
Engineering: Git, GitHub, automated testing, full-stack development, AI integration, human-in-the-loop design, Agile, CRISP-DM

SELECTED CERTIFICATIONS

Supervised Machine Learning: Regression and Classification (DeepLearning.AI), 2026 | AWS Academy Cloud Foundations | AI Fundamentals (IBM SkillsBuild), 2026 | Data Analytics Essentials (Cisco), 2026 | Google Cloud Security, 2026
